Intro

Hello, my name is Azra Yazid. I am a Fullstack Developer. In Front End, I specialize in JavaScript for developing websites, using ReactJS as its library, and either Bootstrap or Tailwind framework to enhance the UI. For Back End, I use either Node.js or Laravel. You can see my portfolio at: <https://azrayaal.vercel.app>

About Me

I discovered my passion for full-stack development in March 2021 and have been dedicated to learning and improving ever since. Starting with Bootstrap and Tailwind, I crafted visually appealing websites. In December 2021, I deepened my knowledge with popular stacks like MERN (MongoDB, Express.js, React.js, Node.js).

Though I faced hurdles, especially in grasping basic algorithms and logic, I persevered and expanded my skills. I'm driven by a passion for using technology to innovate and am eager for the exciting opportunities ahead in full-stack development.
